Shatterproof Safety Lighting Solutions

TIME-GLO SAFETY LAMPS

Time-Glo®

GSS proudly introduces Time-Glo® Safety lamps, the newest addition to our line of shatterproof safety lighting solutions. Time-Glo® incorporates a technically superior, photo-chemical light source within our Mylon® coating. Time-Glo® emits a visually-dramatic, green/yellow glow, immediately after extinguishing all light. In generating light, Time-Glo® emits a strong immediate glow, which registers a spectral peak of 5200 Angstroms. This bright glow, however, decreases at an accelerated rate to 20% of its initial brilliance within the first hour. The decay of this phase of the curve remarkably parallels the natural ability of the human eye to adapt to darkness. This new process creates an illumination that will last for 30 minutes after the lamp is turned off to allow safe egress in case of emergency.
