## MYLON SHATTERPROOF INCANDESCENT U.S.D.A., F.D.A. APPROVED

Glass Surface Systems offers tough, durable protective coatings for a wide variety of Incandescent lamps. These lamp types often produce high bulb surface temperatures that reach around 300 C. Sureguard with Mylon formulation maintain protection while withstanding temperatures of up to 480 C constant.

This product is manufactured by using our Mylon coating to U.S.D.A., F.D.A. and N.S.F. standards. It is the only crystal clear coating on the market that guarantees containment of glass while giving you over 99% of its original light output. Mylon handles consistent heat up to 480 degrees without discoloration.
